Pitt Med Professionalism Accolade

CONGRATULATIONS!

Dana Schaar

MS2 Student

Dana and I spent a lot of time together during the Integrated Case Studies course going over the case studies prior to and after the session. Reviewing the concepts with Dana allowed me to solidify high-yield concepts and improve my long-term memory. Dana spent her precious study time to explain concepts to me that I did not understand through drawing concept maps, directing me to helpful videos online that explained concepts, and more! Through studying with Dana, we were able to recreate the format of the Collaborative Based Learning sessions. Before ICS, I had been using flashcards and the syllabus to retain information. Collaborating with Dana by talking through ICS concepts daily allowed me to improve my long-term retention of concepts useful for Step 1 and clinical rotations.
