

Pitt Med Professionalism Accolade

CONGRATULATIONS!

Hannah Piston

MS4 Student

I was fortunate to be in Hannah's POCUS group during clinical assessment week...Hannah has been in the longitudinal ultrasound course/certificate program and was kind enough to share what she knew with the group in order for everyone to learn and get hands on experience performing a FAST exam. She pointed out structures we were seeing and she also helped the group learn ways to hold the ultrasound probe, orient ourselves to the images on the screen, and gave us tricks such as fanning the probe to get clearer views of abdominal structures. Her skills were very impressive, it is clear she has a passion for ultrasound and I'm thankful she took the time to share them with myself and the group.
